# One Man, One Cow, One Planet

A film about the biodynamic farming revolution in India  
and one man out to empower farmers of the world

BATHURST RSL

Saturday 10th April, 2010 7.30 pm

---

**Industrial agriculture is destroying the earth:** desertification, water scarcity, collapse of ecosystems, soil erosion, massive decline in fertility - as well as a toxic cocktail of agricultural chemicals pervading our food chain.

One man, One Cow, One Planet is a story of hope, a way forward.

Peter Proctor, a NZ biodynamic farmer and horticulturist, shared his experience and expertise with farmers in India and started a farming revolution that serves their humanity and saves the planet.

Farmers in Australia are also participating in this positive change. Farmers hold solutions to our environmental challenges. Farmers growing 2% of organic matter into the top 30 cm of soils in just 10% of the world's agricultural land will anchor all excess carbon currently produced worldwide.

**‘It’s so easy, come on people, wake up.’**

**Peter Proctor, biodynamic teacher**
