

Biodynamic Preparations - Application Rates

Soil Preparations

The soil preparations are applied after 3 PM in large droplets at low pressure, approximately one drop per square metre.

Horn Manure - 500

40 gram per hectare in 35 litres water - stirred vigorously for one hour

Biodynamic Soil Activator

containing: *Horn Manure 500, Biodynamic Manure Concentrate and Winter Horn Clay*

250 gram per hectare in 35 litres water - stirred vigorously for one hour

Winter Horn Clay

10 gram per hectare in 35 litres water, stir in with Horn Manure 500 for one hour

Atmospheric Preparations

The atmospheric preparations are applied as a fine mist; the quantity of water required will depend on the air movement at the time.

Apply: early morning for growth
 late afternoon for ripening.

Biodynamic literature will not refer to afternoon applications. The afternoon application practice has arisen from the experience of biodynamic growers in Australia.

Horn Silica - 501

2 gram per hectare in 15 - 25 litres of water - stirred vigorously for one hour

Summer Horn Clay

10 gram per hectare, stirred in with the Horn Silica 501

Biodynamic Compost Preparations

one set per 6 m² compost heap, 200 litre weed tea, seaweed or any liquid brew

apply liquid brews 1:40 with water or add to Soil Preparations

one Manure Concentrate set per Manure Concentrate pit
